

Iris - A Flower For All Seasons

By growing a variety of different types of iris, you can have beautiful flowers blooming in your garden during any season of the year. The chart below shows how this can be achieved. Please note that not all types of iris grow in every region.

	January	February	March	April	May	June	July	August	September	October	November	December
Aril / Arilbred (AR/AB)				●	●							
Border Bearded (BB)					●	●		ℜ	ℜ	ℜ		
Dutch Iris				●	●							
Intermediate Bearded (BB)				●	●			ℜ	ℜ	ℜ		
<i>Iris foetidissima</i>	●				●				●	●	●	
<i>Iris japonica</i>					●							
<i>Iris reticulata</i>	●	●	●									
<i>Iris unguicularis</i>	●	●	●						●	●	●	
Japanese (<i>I. ensata</i>)						●	●	ℜ	ℜ	ℜ		
Louisiana (LA)					●	●						
Miniature Dwarf Bearded (MDB)			●	●		ℜ	ℜ					
Miniature Tall Bearded (MTB)				●	●			ℜ	ℜ			
Pacific Coast (PCN / PCI)				●	●							
Siberian - 28 chromosomes (SIB)					●	●	ℜ	ℜ				
Siberian - 40 chromosomes (Sino-Sib)						●	●					
Spuria (SPUR)						●	●					
Standard Dwarf Bearded (SDB)				●	●		ℜ	ℜ	ℜ			
Tall Bearded (TB)					●	●		ℜ	ℜ	ℜ	ℜ	

ℜ = Reblooming

Rebloom can depend on climate and culture. An iris known to rebloom in Southern California, may not rebloom in the Pacific Northwest. Reblooming irises do require occasional fertilizer and regular watering to perform at their best.
